Deadbolt Lock

DDL210S-1H

3 ways to unlock

With mechanical override

Featuring a variety of access methods, you can unlock this lock by fingerprint, PIN code, or a mechanical key. Besides, auto-lock, ultra long-life battery and multiple alarm functions provide you additional peace of mind.

3 ways to unlock

This lock provides convenient living and multiple options to suit your lifestyle. It can be unlocked with 20 fingerprints, 50 PIN codes, mechanical keys for family members. You can choose any method to unlock your door. The multi-functional lock makes your life more convenient. With the auto lock setting, you do not have to worry about forgetting to lock the door.

Voice guide

Voice guidance guides you through configuration of the lock without the need for an instruction manual. English, French, and Spanish voice guides are available.

Ultra-long battery life

This electronic door lock consumes little power and lasts up to 1 year* with 4 AA alkaline batteries. When the batteries run low, a low battery alert will remind you to change your batteries, preventing a lockout.

*1 year: This refers to the average time determined by an internal test lab. It is based on the use of PIN code unlocking 8 times, 8 times auto locking, 4 times manual unlocking, 4 times manual locking per day. Actual time may vary due to different usage frequency.

Multiple alert function

This electronic door lock is equipped with a lockout alarm, a low battery alert, away mode for vacations, privacy mode and other security features to ensure the safety of your home at all times. Safer and more secure, Philips electronic deadbolt brings a new smart experience.

Modern design

Modern design fits your door. High quality touch screen keypad, available in multiple finishes. This digital door lock improves doors of any style.

Easy installation

The door lock installs in minutes with just a screwdriver and is suitable for most standard door preps.
